

# **CLAMP ON EARTH TESTER** FT6380, FT6381

**CAT IV 600 V** 

FT6381 Data transfer to Android<sup>™</sup> phones using Bluetooth<sup>®</sup> wireless technology.\* Real time data transfer, automatic report generation on Android<sup>TM</sup> phone.

Please download and install the "FT6381 Communication Software" from the Google Play<sup>TM</sup> store in order to use the wireless connection function with an Android<sup>TM</sup> phone. The software is free, but the user is responsible for any Internet connection costs incurred in the course of downloading or using the application.

## Get Things Done with Super Slim Jaws

## **Easy clamping!**

Open jaws easily with just two fingers. Only half the grip power is needed compared to typical clamp earth testers.

## **Clamp at the narrowest point!**

Now you can easily clamp the earth cable on the pole without digging. The dramatically slim 0.79 inch (20mm) jaws let you finish your job easily and efficiently.

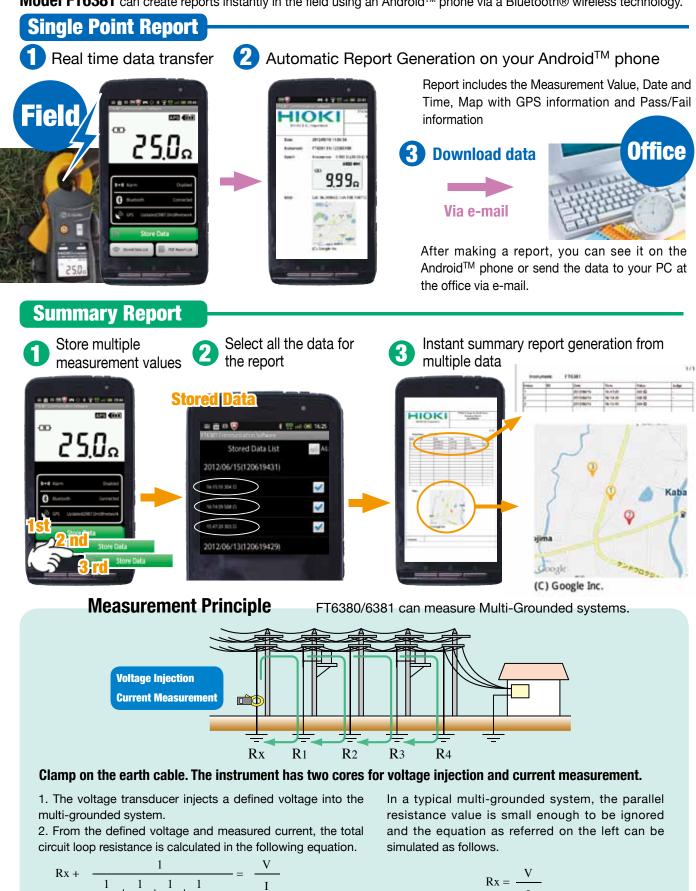

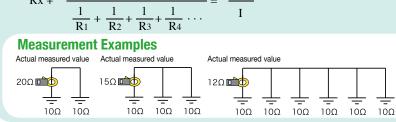

### **Automatic Report Generation**

😫 Bluetooth

For the U.S./ Canada/ Europe/ Singapore/ Mexico/ Japan only

Model FT6381 can create reports instantly in the field using an Android<sup>™</sup> phone via a Bluetooth® wireless technology.

In multi-grounded system, the larger the number of grounding poles, the more accurate the measured value. Where the number of grounding poles are few, if just only one carries a very small resistance (e.g., 1Ω), the measured value will be close to the true value. On the other hand, poles with large resistances (e.g.,  $100\Omega$ ) will result in greater measurement uncertainties.
