

Recorders

## **MEMORY HiCORDER MR8880-20**

## Capture high- to low-voltage signals in a single device Rugged, Professional and Ready for the Field

#### **CAT III 600 V** insulation performance

- Maximum 600V AC/DC input no need for a differential probe • 4 completely isolated channels let you simultaneously record
- data on a 3-phase power line plus have one extra channel

#### Tough against harsh environments

- Operating temperature range: -10°C to 50°C
- Built to withstand mechanical shocks and vibrations (ships standard with side protectors)

#### Make settings easily with PRESETS

Simply select what you'd like to measure and follow the onscreen instructions to select the appropriate settings. The recorder can be easily configured to measure voltage drops and power outages.

# Safe & Reliable Measurement

The MR8880-20 offers safe, reliable operation featuring CAT III 600 V isolated inputs in a compact yet durable design that excels at taking measurements in harsh environments.

Direct input and measurement of 3-phase power lines

### CAT III 600 V isolated inputs (4 channels)

- 4 analog + 8 logic channels
- Directly input 600 V AC/DC (CAT III) and 300 V AC/DC (CAT IV) input. Measure up to 2000V DC/1000V AC (CAT II) with the DIFFERENTIAL PROBE 9322 (separate power supply required.)

Don't let extreme temperatures keep you from taking measurements!

### Built to withstand harsh environments

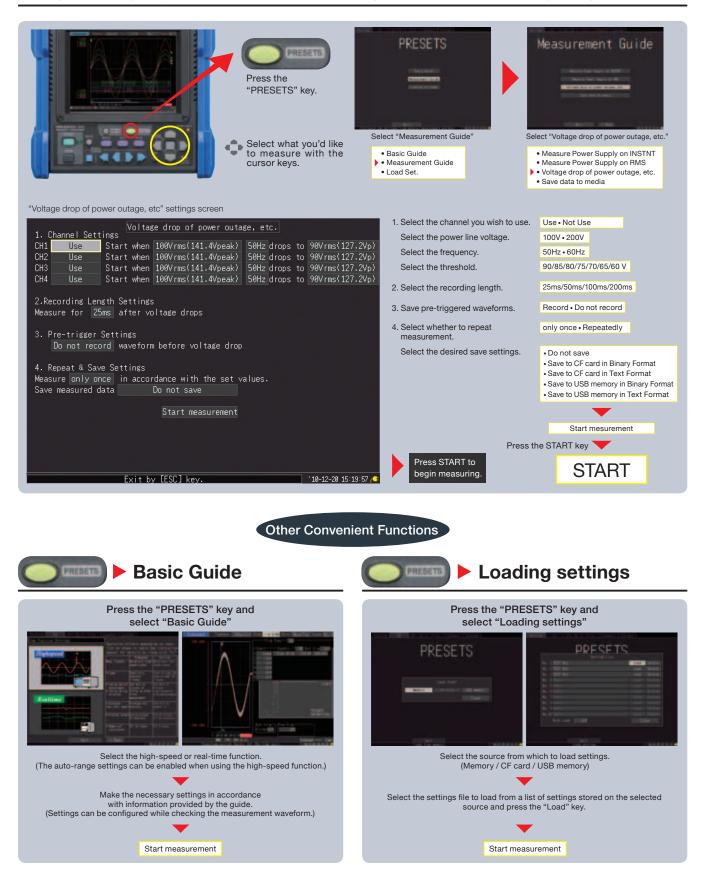

- Extensive operating temperature range [-10°C(14°F) to 50°C(122°F)] Even when operating on battery power, the MR8880-20 can take measurements from 0°C(32°F) to 40°C(104°F).
- Rugged, damage-resistant design features standard side protectors that guard the instrument's case.

# Settings are as Easy as 1-2-3 with PRESETS

To configure the MR8880-20, you need only select what you'd like to measure—"Measure a commercial power supply," "Monitor a power source for a voltage drop," etc.—and follow the on-screen instructions to select the appropriate settings.

#### Example: Configuring the MR8880-20 to monitor a power source for a voltage drop:

## **Applications**

1 kS/s

The maximum recording length is fixed regardless of the number of channels in use

#### High-speed measurement using the high-speed function

- Fastest sampling period of 1 µs (measuring all channels simultaneously)
- Measurement data is recorded in the instrument's internal memory (1 MW).

#### Example record of an abnormal waveform

A waveform recorded using a waveform judgment trigger. The judgment area can be displayed simultaneously.

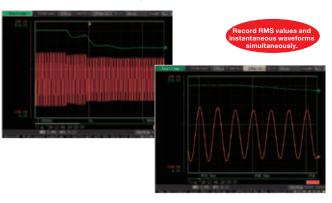

#### Measure RMS value fluctuations for a power line over an extended period of time

Recording Capacity Note: Use only Hicki CF cards that are guaranteed to operate with the HiCorder for continuous long-term recording.

Long-term measurement and recording using the real-time function

- Recording interval of 100 µs to 1 min
- Waveform data is saved directly in a binary format to a CF card or USB memory.

Maximum recording time is inversely proportional to number of recording analog channels.
Because the actual capacity of a CF card is less than that indicated, expect actual maximum times to be about 90% of those in the table

"★" exceeds 1 year

• Proper operation is not guaranteed for extended recording periods (one year or longer). This type of operation impacts the product's warranty period and service life

Measure the phase voltages for all three phases of a three-phase motor simultaneously.

#### Four channels of isolated Cat III 600 V input

The MR8880-20 can measure the voltages at different contacts without the need for a differential probe.

Check for fluctuations in low-voltage signals such as instrumentation or sensor output.

Thanks to its 14-bit, high-resolution A/D converter and the combination of a high-sensitivity 10 mV/div range and a 5 Hz filter (for noise rejection), the MR8880-20 can deliver stable measurement of sensor output.

Investigate why your office's power supply occasionally exhibits instability.

The MR8880-20 is capable of mixed recording of RMS values, DC voltage, and logic signals, allowing it to simultaneously record data describing the interrelationships between equipment power supplies and UPS output and control signals.

# **Functionality and Performance**

The MR8880-20 delivers convenient functionality designed to maximize ease of use along with exceptional performance. See how this instrument can transform your concern and discontent to peace of mind and satisfaction.

#### Take home data for later viewing on a computer

Data can be saved directly to external media.

- In addition to CF cards, the MR8880-20 can store data on handy USB memory sticks.
- Data can be saved in real time to external media (at up to 10 kS/s).
- External media can be switched while measurement continues. If the recording interval is set to 100 µs, media must be swapped outwithin 20 seconds.
- External media is protected in the event of an unexpected power outage during measurement.

By backing up the internal power supply until processing to save data to the external media completes, the instrument enables highly reliable data collection.

Can the MR8880-20 withstand the vibrations in a moving vehicle?

## The instrument complies with JIS automotive vibration standards.

Thanks to its ability to withstand a high level of vibration, the MR8880-20 can be used to collect data in moving vehicles. Included side protectors further increase the device's durability.

The MR8880-20 features a 5.7-inch TFT color

LCD that offers excellent visibility, even while

taking measurements in an outdoor setting.

The display is even engineered for easy

viewing in the presence of reflections.

for 4 hours on battery power.

A high-capacity battery is available.

The MR8880-20 can be used continuously

Use only HIOKI CF cards, which are manufactured to strict industrial standards, for long-term storage of important data.

Note: Operation of non-HIOKI CF cards is not guaranteed

Will the screen be hard to read while taking measurements outdoors?

What if there's no power available in the vehicle being tested?

Is the printer easy to use?

loading mechanism. Quickly print data on-site.

(Real-time print function: 1s/div ~)

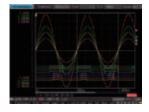

Example printout (actual size)

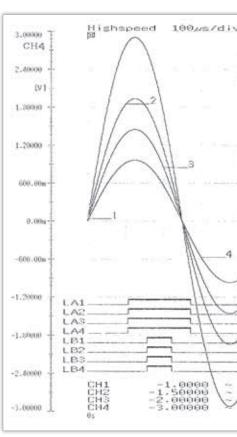

Simply load the recording paper roll and close the cover.

Shown with optional printer unit.

## Specifications

Measurement	Reactions (accuracy guaranteed for 1 year) High-speed function (high speed recording)
functions	Real-time function (actual time recording)
Number of	4 analog + 8 logic
channels	Isolated analog channels, isolated input and outputs, logic has common GND
Maximum sampling rate Memory capacity	1Msamples/s (1 μs cycle, all channels simultaneously) 14bit × 1 M words/ch (1 word = 2 bytes, not expandible)
	CF card slot × 1 (Up to 2 GB, supports FAT16 and FAT32 formats)
External memory	USB memoly × 1 (USB 2.0 -A receptacle)
Time accuracy (at 23°C)	Sampling time accuracy: ±0.0005 %, Clock precision: ±3s/day
Backup function	Clock and settings: 10 years or more (at 25°C / 77°F)
(reference value at 23°C)	Waveform backup function: Approx. 40 minutes • When instrument is powered off at least 3 minutes after being turned o
External control	External trigger input, Trigger output, external start input,
External control	external stop input, status output, ground pin
Interface	USB: 1 port USB 2.0 High Speed mini-B receptacle
	Functions: Configure settings/perform measurement using communication commands; transfer file stored in CF/USB memory to computer (USB drive mode
	Temperature range: -10°C (14°F) to 50°C (122°F)
	Humidity range: -10°C (14°F) to 40°C (104°F), 80% rh or less
Environmental conditions for use	40°C (104°F) to 45°C (113°F), 60% rh or less 45°C (113°F) to 50°C (122°F), 50% rh or less

High-speed fu	nction (high speed recording)
Time axis	100µs to 100ms/div, 10 range, resolution: 100 points/div
Sampling period	1/100 of time axis ranges
Recording length	(minimum sampling period 1 μs, all channels simultaneously) 5 to 10000 divisions fixed (5division steps)
Automatic save	Binary data, text data, calculation results, binary + calculation results,
function	text + calculation results, or NONE
Other save functions	Save and delete function: ON/OFF
Screen settings	Split screen (1, 2, or 4 segments), X-Y waveform compositing (1 screen) Can record data from before the trigger point, 0 to 100 % of
Pre-trigger	recording length; 13 settings, or user-configured
Waveform scrolling	Backwards scrolling through past waveform data both during and
	after measurement Up to four arithmetic operations simultaneously
Calculation	Average value, effective (RMS) value, peak to peak value,
functions	maximum value, time to maximum value, minimum value, time to minimum value, period, and frequency, area, X-Y area.
Real-time fund	tion (actual time recording)
Recording interval	100µs to 500µs, 1ms to 500ms, 1s to 1min, 19 settings Display time axis: 10ms to 1day/div, 22 ranges
Real-time printing	ON/OFF
(with optional MR9000)	*Simultaneous printing: Supported when using a time axis slower than 1 s/div.
Recording Time	Continuous save to CF card or USB memory can be set ON/OFF
Envelope mode	ON/OFF The last 1 Mwords (before measurement was stopped) are saved in
Waveform recording	the instrument's internal memory (when envelope mode is on, 500
	kwords).
Real-time save function	Binary data, text data, calculation results, binary + calculation results, text + calculation results, or NONE
Other save	Split save: ON/OFF/fixed time
functions	Save and delete: ON/OFF
	Eject media: Media can be ejected while saving data in real time. 1) Event marks can be input during measurement (up to 100 marks).
Event marks	2) Can move to waveform before or after an event mark based on
	specified event number input.
Trigger functi	on
Repeat recording	Single/Repeat
Trigger timing	High-speed function: Start Real-time function: Start, Stop, Start & Stop
Trigger conditions	AND/OR supported for all trigger sources
	Trigger sources can be selected for each channel. Instrument enters
	free-run mode when all trigger sources are off. 1) Analog input CH1 - CH4
Trigger source	2) Logic input LA1 - LA4, LB1 - LB4 (4ch × 2 probes)

Screen display		
Display	5.7-inch VGA-TFT color LCD (640 × 480dot)	
Waveform display scale	Time axis: $\times$ 10 to $\times$ 2 (zoom view supported for high-speed recording only), $\times$ 1, $\times$ 1/2 to $\times$ 1/2,000 Voltage axis: $\times$ 20 to $\times$ 2, $\times$ 1, $\times$ 1/2 to $\times$ 1/10	
Comment input	put Titles and comments input for individual channels	
Logic waveform display	Select 2 recording widths; display positions can be set separately	
Display items	<ul> <li>Waveform display; simultaneous display of waveform and gage; simultaneous display of waveform, gage, and settings; simultaneous display of waveform and calculation results; simultaneous display of waveform and cursor values (A/B cursor values)</li> <li>The following display items are supported when using real-time functionality:</li> </ul>	
Monitor function	Value (instantaneous value or RMS value) and measured waveform (monitor screen display with refresh rate of 0.5 sec) Display digits: 5	
Instantaneous value display	Time: Display of time elapsed since start of measurement or trigger point Date: Display of date and time at which data was captured Number of data points: Display of number of data points captured since start of measurement	
Other display functions	<ul> <li>Cursor measurement (two cursors [A/B], support for all channels)</li> <li>Upper and lower limits can be set (to align waveform amplitude with upper and lower limits).</li> <li>The zero position of the analog waveform can be moved in 1% steps.</li> <li>The waveform display can be set to any of 24 colors.</li> <li>Zero adjustment can be performed for all channels and ranges at once.</li> </ul>	
PC Software Specifications Bundled with the MR8880-20 in the CD-R		

#### Wave Viewer (Wv) Software

-	-
Functions	<ul> <li>Simple display of waveform file</li> <li>Text conversion: convert binary data file to text format, with selectable space or tab separators in addition to CSV, and specifiable section, thinning available</li> <li>Display format settings: scroll functions, enlarge/reduce display, display channel settings</li> <li>Others: voltage value trace function, jump to cursor/trigger position function</li> </ul>
Operating environment	Windows 8/7 (32/64-bit), Vista (32-bit), XP, 2000

#### Specifications of Options (sold separately)

Cable length and mass: Main unit cable 1.5 m (4.92 ft), input section cable 30 cm (0.98 ft), approx. 150 g (5.3 oz) Note: The unit-side plug of the 9320-01 is different from the 9320.

LOGIC PROBE 9320-01 (Accuracy at 23 ±5°C/73 ±9°F, 35 to 80% rh, accuracy / product guaranteed for 1 year)		
Function	Detection of voltage signal or relay contact signal for High/Low state recording	
Input	$ \begin{array}{l} \label{eq:contact input, switchable (contact input, and channels), digital/contact input, switchable (contact input can detect open-collector signals) \\ Input resistance: 1 M\Omega (with digital input, 0 to +5 V) \\ 500 k\Omega \mbox{ or more (with digital input, +5 to +50V)} \\ Pull-up resistance: 2 k\Omega (contact input: internally pulled up to +5 V) \\ \end{array} $	
Digital input threshold	1.4V/ 2.5V/ 4.0V	
Contact input detection resistance	1.4 V: 1.5 k $\Omega$ or higher (open) and 500 $\Omega$ or lower (short) 2.5 V: 3.5 k $\Omega$ or higher (open) and 1.5 k $\Omega$ or lower (short) 4.0 V: 25 k $\Omega$ or higher (open) and 8 k $\Omega$ or lower (short)	
Response speed	500ns or lower	
Max. allowable input	$0 \ to + 50 V \ DC$ (the maximum voltage that can be applied across input pins without damage)	

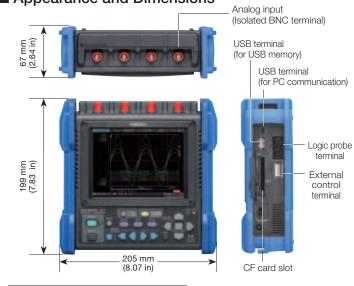

#### Cable length and mass: Main unit cable 1.3 m (4.27 ft), input section cable 46 cm (1.51 ft), approx. 350 g (12.3 oz)

44	
	τ.
	$\sim$
	-

2

(1.51 ft), approx. 550 g (12.	5 0Z)	
DIFFERENTIAL PR	<b>ROBE 9322</b> (Accuracy at 23 ±5 °C/73 ±9 °F, 35 to 80 % rh after 30 minutes of warm-up time, accuracy / product guaranteed for 1 year)	
Functions	For high-voltage floating measurement, power line surge noise detection, RMS rectified output measurement	
DC mode	For waveform monitor output, Frequency characteristics: DC to 10 MHz (±3 dB), Amplitude accuracy: ±1 % of full scale (at max. 1000 V DC), ±3% of full scale (at max. 2000 V DC) (full scale: 2000 V DC)	
AC mode	For detection of power line surge noise, Frequency characteristics: 1 kHz to 10 MHz ±3 dB	
RMS mode	DC/AC voltage RMS output detection, Frequency characteristics: DC, 40 Hz to 100 kHz, Response speed: 200 ms or less (400 v AC), accuracy: ±1 % of full scale (DC, 40 Hz to 1 kHz), ±4 % of full scale (1 kHz to 100 kHz) (full scale: 1000 v AC)	
Input	Input type: balanced differential input, Input impedance/capacitance: H-L 9 MΩ/10 pF, H/L-unit 4.5 MΩ/20 pF, Max. rated voltage to earth: when using grabber clip 1500V AC/DC (CAT II), 600 V AC/DC (CAT III), when using alligator clip: 1000 V AC/DC (CAT II), 600 V AC/DC (CAT III)	
Max. allowable input	2000 V DC, 1000 V AC (CAT II), 600 V AC/DC (CAT III)	
Output	Voltage divider for 1/1000 of input, BNC connectors (output switchable for 3 modes DC, AC, RMS)	
Power source	Use the AC Adapter 9418-15 Note: power cannot be supplied from the logic terminals of the MR8880-20	

#### Appearance and Dimensions

with PRINTER UNIT MR9000 attached

Cable length and mass: Main unit cable 1.5 m (4.92 ft), input section cable 1 m (3.28 ft), approx. 320 g (11.3 oz) Note: The unit-side plug of the MR9321-01 is different from the MR9321.		
LOGIC PROBE MR9321-01 (Accuracy at 25 ±5°C/13 ±9°F, 55 to 80% rh, accuracy / product guaranteed for 1 year)		
Function	Detection of AC or DC relay drive signal for High/Low state recording Can also be used for power line interruption detection	
Input	4 channels (isolated between unit and channels), HIGH/LOW range switching Input resistance: 100 k $\Omega$ or higher (HIGH range), 30 k $\Omega$ or higher (LOW range)	
Output (H) detection	170 to 250 V AC, ±DC 70 to 250 V (HIGH range) 60 to 150 V AC, ±DC 20 to 150 V (LOW range)	
Output (L) detection	0 to 30 V AC, ±DC 0 to 43 V (HIGH range) 0 to 10 V AC, ±DC 0 to 15 V (LOW range)	
Response time	Rising edge 1 ms max., falling edge 3 ms max. (with HIGH range at 200 V DC, LOW range at 100 V DC)	
Max. allowable input	250 Vrms (HIGH range), 150 Vrms (LOW range) (the maximum voltage that can be applied across input pins without damage)	

WAVE PROCESSOR 9335		
Distribution media	One CD-R	
Operating environment	Computer running under Windows 8/7 (32/64-bit), Vista (32-bit), XP, 2000	
Display functions	Waveform display, X-Y display, Digital value display, Cursor function, Scroll function, Maximum number of channels (32 channels analog, 32 channels logic), Gauge display (time, voltage axes), Graphical display	
File loading	Readable data formats (.MEM, .REC, .RMS, .POW), Maximum loadable file size: Maximum file size that can be saved by a given device (file size may be limited depending on the computer configuration)	
Data conversion	<b>Conversion to</b> CSV format, Tab delimited, Space delimited, Data culling (simple), Convert for specified channel, Batch conversion of multiple files	
Print functions	Printing image file output (expanded META type, "EMF"), Supported printer: usable on any printer supported by operating system Print formatting: (1 up, 2-to-16 up, 2-to-16 rows, X-Y 1-to-4 up, preview, hard copy)	
Other	Parameter calculation, Search, Clipboard copy, Launching of other applications
